Internet Connection Service Background: Each Internet Connection (PC or Hub) includes one 10 or 100 Mb/sec Ethernet connection over Category 5, UTP copper cable with RJ-45, 568B wired connector. Each Internet Connection includes one IP address. StreamLine will provide all configuration information including DNS, Gateway address, Subnet Mask and IP address(es). Exhibitor or show management ordering services is responsible for configuration and operation of PC's, applications software and PC Network hardware connected to the network provided. For additional IP addresses, exhibitor is responsible for supplying their own network hub/switch and cables. Each computer utilizing the Internet/Network **REQUIRES** the purchase of an IP address regardless of whether router, web or proxy server, NAT machine, wireless or private networking is utilized.

Internet Access Network: Internet Access at the San Jose Convention Center is through a DS-3 (45Mb/sec) circuit from Allegience / Intermedia (30 times the performance of a standard T-1 connection). The high speed Data Network Systems consists of Cisco Routers, and network hubs & switches from Cisco Systems and Allied Telesyn.
